

ENERGY STAR® program

For the average U.S. household, about half of the energy costs go toward heating and cooling. Improving the "envelope" or outer shell of the home can significantly reduce these costs. EPA recommends a process of effective air-sealing techniques and additional insulation called Home Sealing to improve the envelope of the home.

As an ENERGY STAR(R) partner, Progressive Foam Technologies' flagship product, the Fullback Thermal Support System, along with other EPS products produced by Progressive Foam, are ENERGY STAR qualified products as a part of the Home Sealing effort.

ENERGY STAR was introduced by the U.S. Environmental Protection Agency in 1992 as a voluntary market-based partnership to reduce air pollution through increased energy efficiency. Today, with assistance from the Department of Energy, the ENERGY STAR program offers businesses and consumers energy-efficient solutions to save energy, money and help protect the environment for future generations.
