

# HANDLING, STORAGE & INSTALLATION OF HALO® INSULATION PRODUCTS

---

## Material Handling

Material handling, and the flow of materials from manufacturing site to job site is a significant part of the construction process. Precautionary measures taken in packaging, storage, transportation and installation of Halo products can help minimize the potential for damage to the products.

## Jobsite Storage

Precautions taken when storing insulation products on the job site can help minimize the potential for damage. Keep Halo products tarped or covered to protect from weather. Do not use a clear plastic covering film. If possible, store indoors. Care should be taken to keep stored Halo products protected from reflective sunlight or prolonged solar exposure.

## Installation

Precautions taken during the construction process can help minimize the potential for thermal expansion or damage. Care should be taken to keep installed Halo products protected from reflected sunlight or prolonged solar exposure. Removing or covering the surface that is creating the reflection or shielding the affected Halo products will help restore the original dimensions in the event of thermal expansion.
